

Oval Gear Flowmeter for Low and High Viscosity Liquids

DON

ATEX 

- Measuring Range:
0.13 ... 9.5 GPH to 40 ... 660 GPM
- Viscosity Range: up to 1000 cP
(Higher upon Request)
- Accuracy: $\pm 0.2\% \dots 1\%$ of Reading
- Material: Aluminum or Stainless Steel
- p_{\max} : 1450 PSI; t_{\max} : 300 °F
- Pulse Output, LCD Display, 4...20 mA,
Alarms, Mechanical Totalizer

Oval Gear Flowmeter Model DON

Description

Oval gear flowmeters are categorized as positive displacement flow technology. When liquid flows through this type of positive displacement flowmeter, two oval geared rotors measure a constant volume per rotation within a precisely machined measuring chamber. With each rotation, a constant volume of liquid is measured. The rotation of the oval gears is sensed via magnets embedded within the rotors. These magnets transmit a high resolution pulse output. The output signal can be processed externally via a remote display controller or PLC or via a variety of output/display options available as accessories attached to the flowmeters.

Operation:

Liquid travels around the crescent shaped chambers created by the rotational movement of the rotors

The positive displacement flow technology allows for precise flow measurement of most clean liquids regardless of the media's conductivity. Other liquid properties also have a minimal effect on the performance of this type of meter. Flow profile conditioning is not required, as with alternative flow technology options, making oval gear installations simple to install in tight spaces and at an economical price.

Areas of Application

Suitable for viscous, non abrasive, clean liquids like:

- Petroleum
- Oil
- Chemicals
- Grease
- Fuels
- Ink
- Pastes

Aluminum body meters are compatible with fuels, fuel oils, & other lubricating liquids. In addition to lubricating media, stainless steel flowmeters are suitable for most products and chemicals.

Technical Data

Materials

DON-1

Body: Aluminum
Gears: PPS GF30/PTFE
Axles: 316L Stainless Steel

DON-2

Body
DON-x05 ... DON-x15: 316L Stainless Steel
 (DON-205 Body Cover is 316LN SS)
DON-x20 ... DON-x60: 316L/301* Stainless Steel

Gears

DON-x05 ... DON-x40: 316L Stainless Steel

DON-x55				
DON-x60				

With flanges: Maximum pressure rating as above or as per flange rating, whichever is lower.

* Max pressure of 1450 psi possible with steel screws (see order details)

Output Types

Reed Switch Pulse Output (..R0/RE)

The reed switch output is a two wire, normally open, SPST, voltage free contact ideal for installations without power or for use in hazardous area locations where Intrinsically Safe (I.S.) is required.

Note: when using the reed switch output, the liquid temperature must not change at a rate greater than 18 °F per minute.

Average switching life of reed contact (MTTF):

Max. Load (100 V / 10 mA) 5×10^5 switching cycles

Min. Load (<5 V / 10 mA) 5×10^8 switching cycles

Power supply: max. 30 V_{DC}, max. 200 mA

Hall Sensor Pulse Output (..H0/HE)

In the electronics options H0/HE, a Hall Effect sensor is combined with an active push-pull output. The signal output is actively switched either to +Vs or to ground. No additional external circuit is required (e.g. pull-up resistor). The "high" signal is approximately equal to the supply voltage +Vs and the "low" signal is approximately 0 V. The electronic utilizes a 3-wire connection with an external supply voltage of 8...30 V_{DC}. The electrical load may be optionally connected to the supply voltage or to GND. Maximum output current (current source or sink): 100 mA (short circuit protected). In addition to the Hall sensor, this option is equipped with a Reed switch which works the same as option R0/RE.

No responsibility taken for errors; subject to change without prior notice.

Hall Sensor Pulse Output (..HU)

Like option H0, except an NPN output in place of the push-pull output and a supply voltage of 5-30 V_{DC}.

Hall Sensor Pulse Output, (..B0/BE)

Like options H0/HE; however with bipolar sensors and alternating polarized magnets. This option is used for pulsating flow, but is not equipped with a Reed switch and has half the k-factor value as compared to H0/HE.

High-Resolution Hall Sensor Pulse Output, (..G0/GE, ..K0/KE)

Like options H0/HE; the models DON-x05 and DON-x10 can be supplied with four times the pulse count per volume unit and models DON-x05...x20 with double the amount of pulses (K0/KE) (see table «Output Pulse Resolution» on the following pages).

Quadrature Hall Effect Pulse Output (..D0/DE)

The DON with option D0/DE provides two independent Hall sensors. They are arranged to give separate outputs out of phase with one another.

The QUAD output is mostly suitable for detecting bidirectional flows (detection of flow direction) or where a redundant signal is desirable. Maximum output current per channel (current source or sink): 100 mA (short circuit protected).

Analog Output (..L0/LE)

The options L0 and LE (Ex) are available with a loop-powered 4-20 mA output. The loop must be powered with an external, 16...32 V_{DC} power supply. The maximum resistance of the series loads (PLC analog input/display electronics) depends on the magnitude of the supply voltage and can be calculated as follows:

$$\text{Max. load [Ohm]} = (+Vs - 9 V_{DC}) / 0.02 \text{ A } [\Omega]$$

$$\text{Example: } +Vs = 32 V_{DC} \Rightarrow \text{max. load} = 1150 \Omega$$

$$+Vs = 16 V_{DC} \Rightarrow \text{max. load} = 350 \Omega$$

The load can be inserted at any point in the current loop, observing correct polarity.

Mechanical Totalizer (..M4)

The DON-x20 .. through DON-x60 .. are available with a 4-digit resettable totalizer and indication of accumulated total value. The motion of the rotors is transmitted to the mechanical register totalizer via an interfacing reduction gear train and dynamic seal assembly. Option M4 is also optionally available in liters.

Body Material: Enameled Die-cast Aluminum, Powder-coated

Protection: IP 65
Ambient Temp: 32...140 °F
Media Temp: -4...176 °F

Recommended Filtration Requirements:

DON-x05 ... DON-x15 < 75 μm (200 mesh)

DON-x20 ... DON-x35 < 150 μm (100 mesh)

DON-x40 ... DON-x60 < 350 μm (45 mesh)

- ⑥ Special Cut Rotors 5 % of Full Scale

Pressure Drop Limit Versus Flowrate

The curves above represent the pressure drop for standard cut oval rotors. Special cut rotors, option "Y" have alternate tooth relief which effectively reduces the pressure drop by 50%. When sizing a meter, be sure your selection falls below the 1 bar (14.5 PSI) maximum allowable pressure drop line on the graph.

Oval Gear Flowmeter Model DON

Maximum Flowrate Multiplier (for Higher Viscosities)

Viscosity (cPs)	Standard Rotor	Special Cut Rotor
≤ 1,000	1	1
≤ 2,000	0.5	1
≤ 4,000	0.42	0.84
≤ 6,000	0.33	0.66
≤ 8,000	0.25	0.5
≤ 30,000	0.15	0.3
≤ 60,000	0.12	0.25
≤ 150,000	0.1	0.2
≤ 250,000	0.05	0.1
≤ 1,000,000	0.025	0.05

Special Cut Rotors for Higher Viscosities

For viscosities > 1000 cP, special cut rotors (option: "Y") are normally required to keep the maximum pressure drop from exceeding acceptable levels. This option applies to DON-x15 and larger sizes. For higher viscosities, the flowmeter max. flowrate is derated according to the table above.

Example:

DON-x25G measuring viscous oil at 8000 cP:

max. flow of 40 GPM x 0.5 = 20.0 GPM new max. flow rate.

Noise Level (in dB) at Full Scale

Size	PPS Gears	SS Gears
x25	83	91
x30	84	93.1
